

Transmit converter 3674.2mhz (80m) to 474.2khz (630m)

For sale, Used MS Solutions transmit converter for sale. Bench tested 22 watts out with 13.8v supply. **\$90 shipped US only**, see picture. The bottom of the circuit board was damaged (runs were lifted when the output mosfet was replaced). I repaired the board and modified so that the mosfet could be replaced as a surface mount on the component side of the board. The Transverter is fully repaired and bench tested. If the mosfet needs to be replaced it is now easier than through the hole as was originally designed.
